JOHN DEERE

NOTHING RUNS LIKE A DEERE

THE NEW 6M SERIES

John Deere Introduces New 6M Tractor Series

John Deere announces the introduction of the new 6M tractor series with a significantly expanded model line up. The series now offers 17 models in total, including 10 above 150hp suitable for the most diverse farm needs. From the compact 6M 95 to the powerful 6M 250, spanning various frame-size segments, the series now provides even more choice for farmers looking for high performing tractors with little handling complexity.

Noteworthy additions include the high-horsepower 4-cylinder 6M 150 and the upgraded 6M 145 with six cylinders. Equipped with a 4.5 or 6.8 litre engine, all models offer additional horsepower of up to 20 hp (rated power) with Intelligent Power Management (IPM) system in transport or PTO applications.

A broad range of transmission choices, from the well-known and proven mechanical PowrQuad Plus to the stepless AutoPowr technology, ensures optimal performance for all needs. Furthermore, all 6-cylinder 6M models can be equipped, as an option, with larger hydraulic pumps delivering 155 l/min or up to 195 l/min enabling maximum productivity when running larger implements.

Expanded Model Line-Up

The 6M tractor series now features 17 models, including 10 models above 150 hp, catering to a wide range of farm operations.

In the small frame segment, the new 6M 150 joins the line-up as a high-horsepower model that is exceptionally powerful with a maximum 177 hp with IPM but also compact and nimble.

Within the midframe segment, the 6M 145 model has been upgraded to feature six cylinders instead of four, while the addition of the new 6M 165 and 6M 185 models further diversify this entire segment.

The large frame segment also welcomes two additional models, the 6M 220 and 6M 240, offering robust performance and versatility for demanding tasks.

The extra-large frame segment now showcase the all-new 6M 230 and 6M 250 models, setting standards in power and efficiency for larger-scale operations.

Xtra Large Frame

260Hp (191 kW) – 281 (206 kW) max power (ECE-R120) with IPM

Large frame

208Hp (153kW) – 270Hp (199 Kw) max power (ECE-R120) with IPM

Mid Frame

171Hp (126 kW) – 213Hp (157 Kw) max power (ECE-R120) with IPM

Small Frame

156Hp (115 kW) – 177Hp (130 kW) max power (ECE-R120) with IPM

Precision Farming on Demand

With the high-resolution 10.1" G5 or the 12.8" G5 Universal Display, operators can seamlessly connect their ISOBUS implement and utilize John Deere Precision Ag Technology for enhanced productivity. Features like AutoTrac, Section Control, and Variable Rate Application offer precision farming solutions, optimizing field performance. Data Sync enables wireless sharing of field data and guidance line between machines, streamlining operations and maximizing efficiency.

Always Up to Date

The integration of JDLink provides remote operator support and ensures that all new 6M tractor models receives the latest over-the-air software updates, keeping them up to date with the latest advancements in technology.

Short Frame

120Hp (88 kW) – 150Hp (110 kW) max power (ECE-R120) with IPM

INSTANT PRODUCTIVITY

THE 6M: POWERFUL. FAST. INTUITIVE.

No fuss, all the power you need and faster – the 6M experience is all about getting things done. These powerful tractors are cost-effective to own, supremely easy to operate from the get-go and will have you zipping along at up to 50 km/h. Built for those who go beyond the ordinary.

MAXIMUM DURABILITY

The John Deere Full-frame design forms the rugged backbone of all 6-Series tractors. Engine and transmission are mounted within the frame on insulating blocks that reduce stress and operating noise. It's the perfect platform for a John Deere front loader.

‘This combination of power, payload capacity, hydraulic performance, and axle options makes the 6M series models a reliable and efficient choice for farmers who are looking for high-performance and versatile tractors that present great comfort while being as convenient and straightforward to operate as possible’ – Philippe Steinmann

HarvestLab 3000

HarvestLab 3000 is a highly accurate mobile laboratory that measures crop and slurry constituents for better analysis and planning of crops and fertiliser strategies. It can be fitted to combines, slurry tankers and forage harvesters or used as a standalone analytical tool for feed analysis. Using Near-Infrared Spectroscopy HarvestLab 3000 takes more than 4,000 measurements every second for highly accurate analysis. It replaces traditional manual sampling techniques with real-time measurement in the field.

Easily Document Data - an app for farm management

John Deere Operations Centre allows to create reports on fertilizer, spraying and other field based work carried out on connect John Deere in-cab displays. Analyse this data through your phone whilst using your computer to set up work, create reports and monitor, plan and maximise your farm or turf business' potential.

Primary uses of the Operations Centre and JDLink:

- Machine location and utilization
- Fuel and ad-blue levels, fuel usage reports
- Wireless data transfer – work documentation, live work progress, detailed equipment status, work set up planning
- Work reports – including maps and the ability to easily publish all information of a job from a fuel, e.g. Fuel averages, fertilizer rate, seed variety and rate, harvest yields and more...
- Farm mapping – maps created in-cab sync with computer/phone app
- Create geofences and curfews
- Dealer support – Diagnostics, remote display access, maintenance support.

John Deere GPS Systems

John Deere Telematics System JDLink visualise and compare machine performance data across your John Deere fleet or even across multiple John Deere Operation Centre Organisations.

Live machine data indicates your performance of the machine and allows machine optimization. In addition to the live machine data (e.g. Fuel consumption or engine load), live machine positions of the whole fleet are visible from anywhere at any time.

Diagnostic Trouble Codes from your John Deere machines make proactive maintenance possible in real time, on-the-go, and help to significantly reduce your machines maintenance costs.

- Our JDLink modems connect your machines for fast data transfer and bring connectivity to your entire fleet regardless of equipment brand or age.
- Stream machine and field data to your John Deere Operation Centre account.
- Track and document agronomic data by pairing a G5 or G4 display.

SERVICE OFFERS

Tractor servicing includes:

- Oil change
- Air filter replacement
- Fuel filter replacement
- Coolant check
- Hydraulic fluid check
- Battery check
- Tire inspection
- Greasing moving parts
- Transmission and differential fluid check
- Electrical systems check
- Belt and hose inspection
- Brake inspection

TRACTOR SERVICING

ARE YOU SAFETY CHECKED?

Get covered for LOLER 98 & PUWER 98 regulations

Thorough Examination is a legal requirement on all lifting equipment.

- Full inspection of machine.
- Report of any faults found and advice on remedial work.
- Pass certificate on completion of required work.

Tractor £150
Handler £175

SILOKING SERVICE OFFER

15% off parts and labour

EXPERT CHECKS

Preparation is everything. Get your machine ready to deliver your best season yet. Book an expert check today!

Uptime

Maximise your availability machine with a reduction from up to 90% downtime. Trust us to help you keep your machines running smoothly, so you can focus on what matters most – your business

Cost of Operation

Prevent any collateral damage and reduce your cost of operation with preventive inspections by our professional technicians. They will take a closer look at your used John Deere tractor for anything not working perfectly.

Comfort

Get maximal comfort by control of your cab and front axle suspension system to ensure a smooth and comfortable ride, even in the toughest work environments.

What is an Expert Check?

Put your machine through our extensive point-by-point technical check carried out by our certified technicians and get a comprehensive overview of your machine's status and needs.

We assess sensors, electronic components and software using the John Deere Service ADVISOR – a tool exclusive to John Deere dealers and use many season's worth of global field data to learn what components to focus on. It's how we catch the slightest issue before it can cause you bigger problems next season!

Book in your 7 year plus tractor today!

Parts

Alternatives by John Deere

Alternatives by John Deere are your best parts for machines that do not experience the high-intensity use of your primary equipment. All parts from this competitively priced product line go through a John Deere certification process, that ensures they will always fit better than parts from other manufacturers.

CONVENIENT:

It's fast and easy to obtain the right Alternative part. Your John Deere dealer has it available, along with the expert advice you need to get your repairs down and back to work quickly.

AFFORDABLE:

The best part: Alternatives by John Deere are a value-priced option that's ideal when you need to focus on the work at hand rather than the years to come.

MAINTENANCE PLANS

We can tailor maintenance contract for your machine to keep it serviced up to date and maintaining high performance, the benefits:

- Optimised machine maintenance intervals tuned to usage and seasons
- Adaptive maintenance plan according to machine type, options and serial number.
- Reduce cost of operation
- Timely maintenance notifications from your dealer based on live hourly machine usage data.

What is a Maintenance Plan?

This is where we calculate the value of the servicing for a specified term, based on your estimated annual usage, upon signing the value of the plan can then be paid monthly, quarterly or at any interval to suit your cashflow, by standing order.

Why is this a benefit when I can just pay whenever a service is carried out?

The benefit is that by entering into a plan you fix your costs for the term of the plan, allowing you to know your servicing costs to the penny every month. We also know that servicing modern, sophisticated machines can lead to bills that some months can be disruptive to cashflow, so a plan would ease this.

My tractor is 10 years old, can I put maintenance plan on it?

There is no age limit as to the machine the plan is to be applied to, likewise we can put plans on tractors, loadalls, combines, foragers or even Gators.

If I take out an extended warranty do I need a maintenance plan?

Extended warranty is to cover your machine in the event of a mechanical breakdown. A maintenance plan is purely to provide servicing at the time it is due, and is a prerequisite of any of the extended warranties we offer. That said, you can take out a maintenance plan without an extended warranty, but you cannot have an extended warranty without a supporting maintenance plan.

What happens if I sell my tractor halfway through the plan?

The plan can facilitate cancellations so that you only pay for the servicing you have had.

What happens if I finish paying but haven't had all my services?

Then Mona Tractors will come and do the services when they are due.

Kverneland 853 PRO-856 PRO

Blockage Free Dosing and High Blowing Performance

HIGHLIGHTS

- 3.0m chamber
- Blowing distance up to 20m
- 4-stage swivelling Pro chute or side chute
- Drum Feed Control System – blockage-free design
- Unique drum-knife for a wide variety of materials

For more information please contact:

Llangefni – 01248 750075

Llanystumdwy – 01766 810222

Ruthin – 01824 708810

Easy Loading of Bales

The hydraulically operated rear door fitted to 800 series provides a self loading facility for easy loading of square and round bales.

The rear door also offers the ability to carry a second round bale for increased capacity

Drum Feed Control System

The Drum Feed Control System is an exclusive feature, designed to handle even the most difficult material when feeding.

The PRO Chute

- The Pro chute operates in 3 stages to optimize the blowing distance for bedding
- Blowing distance up to 20m
- Designed with a turning radius of 260 degrees which enables easy access to even difficult reachable spaces

Two-Speed Gearbox

To provide the correct flywheel speed for bedding and feeding the Kverneland 853 and 856 are fitted with a two speed gearbox.

- At lower speeds the flywheel ensures a metered flow of silage or hay for feeding.

FINANCE LEASE

AFFORDABLE, QUICK START

It's an attractive leasing option with fixed repayments. Since VAT is payable on each lease payment rather than in full at the outset, this is an easy start. The finance lease starts with a primary lease period, typically 2-5 years – which covers the full cost of the equipment. At the end of it, you may request the equipment to be sold to a third party – the proceeds from the sale are yours to keep. Or you can opt for a secondary lease period, continue to use the equipment in exchange for prearranged annual fee. Start using your new machine quickly, with a low deposit and easily budgeted fixed payments.

Finance lease requires low initial capital outlay and features fixed payments, fixed interest and no usage restrictions.

KEY BENEFITS OF FINANCE LEASE

- Easy start – lower initial cash outlay, VAT is spread over the lease payments
- Tax benefit – your lease repayments are business expenses; you may be able to offset them against taxable profits
- Easy budgeting – fixed interest rates
- Control – you are entitled to 100% of the proceeds from the sale
